

All Weather Repair Tape - WT

Surface Preparation:

It is important to clean the surface of the film prior to applying the Redpath Woven All Weather Repair tape.

The surface on which the tape is to be used must be clean, dry and free from grease and dust. Remember that pressure sensitive adhesive must be applied with the maximum possible pressure in order to achieve maximum adhesion levels. The recommended application temperature is between 15°C and 25°C.

Storage:

Tapes stored below the minimum application temperature will require warming up to that level before use. Up to 24 hours may be required for this to take place.

Technical Details:

Gauge:	0.165mm
Tensile Strength:	63 N/cm
Elongation at Break:	14%
Service Temperature:	-10°C to 60°C
Storage Temperature:	15°C to 25°C
Shelf Life:	12 Months
